FOR IMMEDIATE RELEASE:

NEW PERIMETRIC HOODS FROM JENN-AIR: A WHOLE NEW ANGLE TO KITCHEN VENTILATION

ATLANTA (May 1, 2009) – Whether sautéing shrimp in garlic or pan searing a filet, mastering high heat recipes without smoking family and guests out of the kitchen calls for proper ventilation. Jenn-Air, a cooking appliance innovator and the pioneer of downdraft ventilation, offers a bold, new take on kitchen ventilation with the introduction of stylishly angular, high performance ventilation hoods that not only clear the air, but can be hung on the wall like picture frames.

Available this fall, the new ventilation system is designed to remove smoke, steam and cooking odors by pulling air through thin channels located on the perimeter of a glass finished panel. Perimetric refers to perimeter based ventilation openings.

“This unique design blends innovation and elegance for superb results and best-in-class cooking performance,” notes Juliet Johnson, manager of Jenn-Air brand experience. “The benefit is a ventilation hood that enhances kitchen styling, air quality and the overall cooking experience.”

The new Jenn-Air® hood features a high-gloss, angled glass panel, framed by stainless steel trim. The quiet and efficient performance of the border ventilation openings results in concentrated suction and reduced noise while allowing for a more streamlined, unobtrusive panel.

“Beyond the advanced updraft ventilation performance, what immediately stands out is the way the innovative two-inch vertical perimetric vent with the glass panel design hangs on the kitchen wall, much like a picture frame,” adds Johnson.

NEW PERIMETRIC HOODS FROM JENN-AIR: A WHOLE NEW ANGLE TO KITCHEN VENTILATION /Page 2

The distinctive look of the perimetric design offers a contemporary alternative to more traditional overhead ventilation that works with a variety of kitchen styles to blend seamlessly or emerge as a kitchen design focal point. In addition to this latest two-inch vertical perimetric design available in a 32-inch wall mount model, the Jenn-Air ventilation collection includes 30- and 36-inch glass wall mount designs, and 36- and 42-inch glass island configurations.

Key features and benefits found across the ventilation collection include multiple speed settings for greater control, an optional chimney extension for better placement options, and a duct-free installation option when ductwork is undesirable or not possible.

The perimetric panel features a contemporary glass finish design in black with stainless steel trim or white with white trim that coordinates with both Jenn-Air® Floating Glass and Euro-Style Stainless appliance suites. Additional style options include trim kits available in an Oiled Bronze and black aluminum finish.

Since the introduction of the first self-ventilated cooktop in 1961 and downdraft ventilated range in 1965, Jenn-Air has consistently grown its reputation as a technology and design innovator. Its selection of style options includes two distinct stainless steel collections and two cutting edge finishes: Floating Glass and Oiled Bronze. From downdraft cooktops, wall ovens and professional-style ranges to dishwashers, refrigerators and such entertaining essentials as warming drawers, built-in ice machines and wine cellars, Jenn-Air offers a complete line of major kitchen appliances.
